

# Updating Your Browser

Updated: April 7, 2016

As a web app, your EventBooking experience depends on your browser. You will have the best EB experience if your browser is always updated to the latest version. See the instructions below for how to update your browser.

---

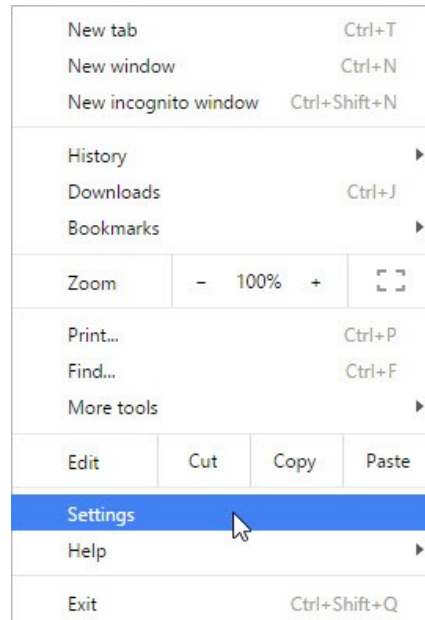

## Chrome

Chrome will auto-update unless those updates are disabled by your administrator. To see if you are on the latest version:

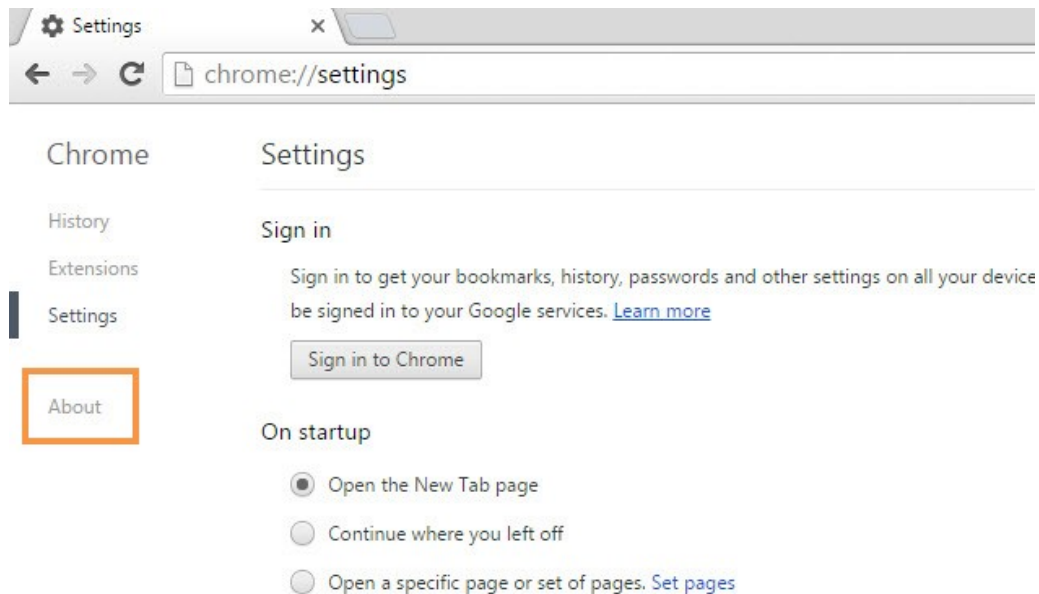

1. Click on the Chrome menu in the upper right corner of your browser.

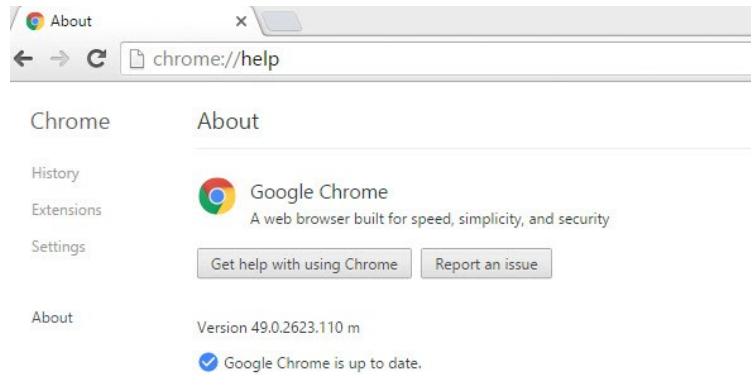

2. Click *Settings*.

3. Click *About* in the left sidebar.

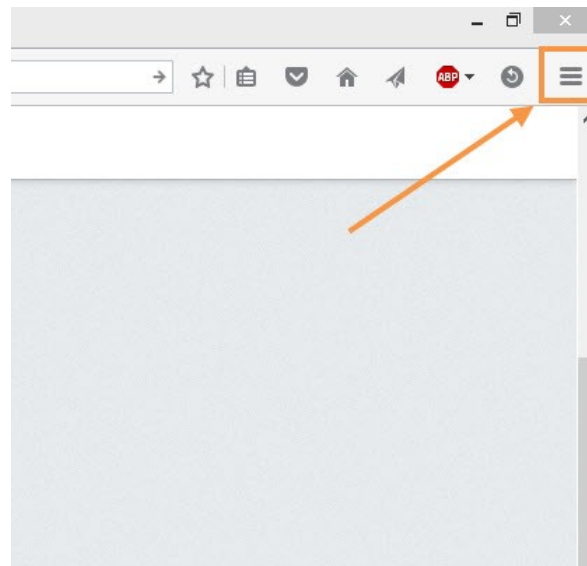

4. Chrome will check for updates when you are on this page, and confirm that you are on the latest version.

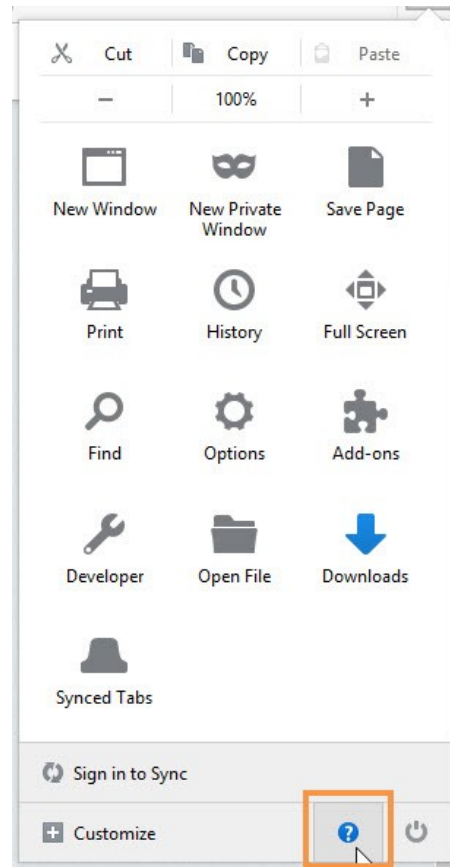

---

## Firefox

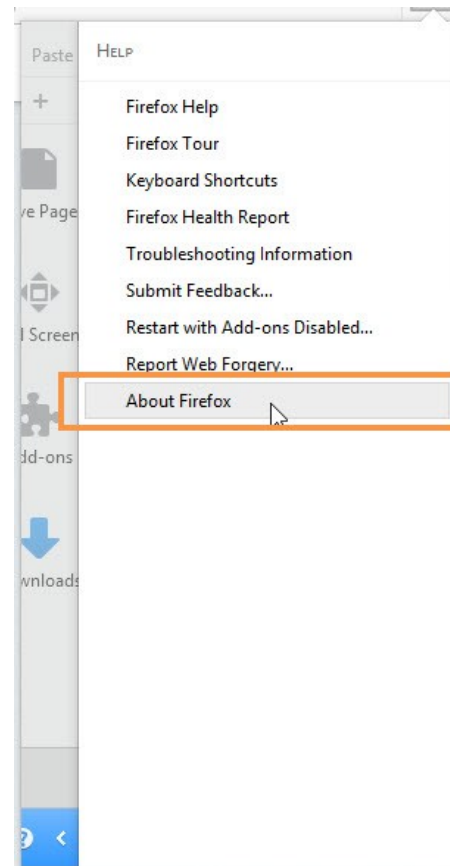

1. Click the menu in the upper right corner of your browser window.

2. Click the ? icon at the bottom of the menu.

3. Click *About Firefox* in the Help Menu.

4. Firefox will begin checking for updates.

5. When Firefox has finished updating, click the *Restart Firefox* button.

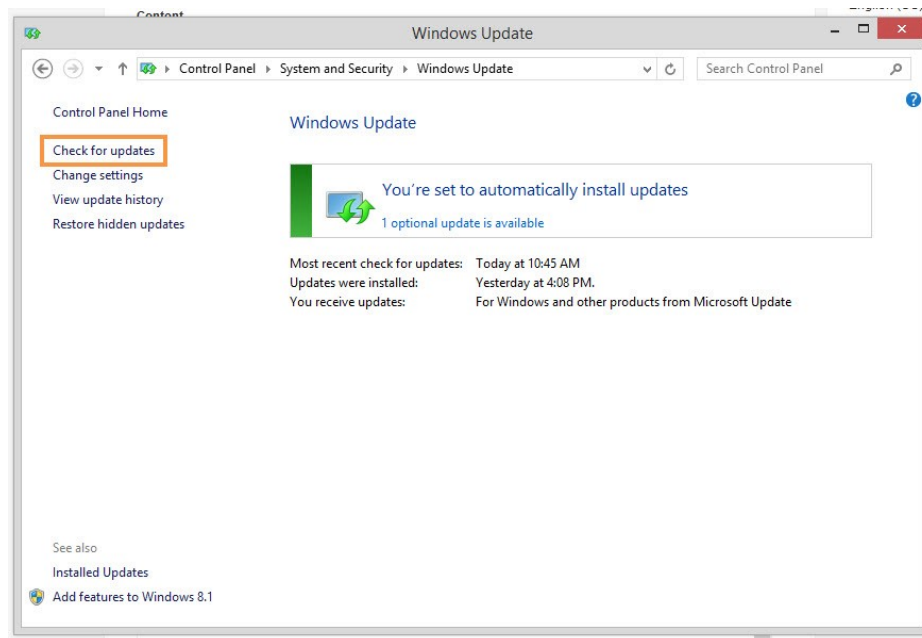

---

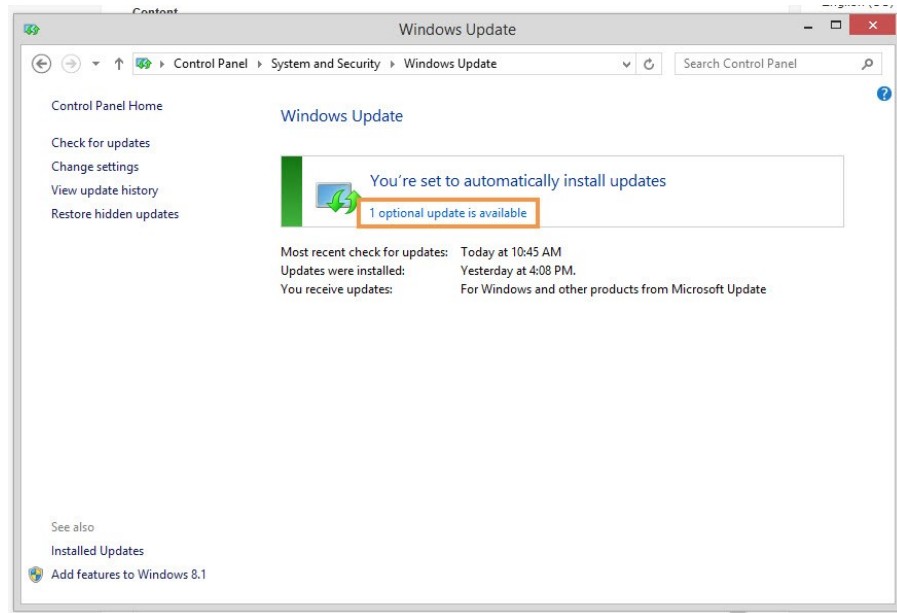

## Internet Explorer

Since Internet Explorer is part of your Windows system, it is not updated in the browser itself - you will need to use Windows Updates. Depending on your facility, you may need to ask your IT department for assistance. Please note that we only support Internet Explorer 11 or the new Edge browser.

1. Go to the start menu or start page and search for *Windows Update*. In the left sidebar, click *Check for updates*.

2. Click the blue link if updates are available.

3. In the list of updates available, look for any updates to Internet Explorer. Select those updates, and click *Install*.
